

Cloud-based data acquisition, analysis and reporting software

Darca Connect has been designed specifically for environmental monitoring on both large and small scale sites, e.g. museums and art galleries, pharmaceutical and distribution warehousing, school, university, office, conservation and research laboratories. With sensors referred to according to their physical location and data accessed by multiple users, it provides powerful but simple-to-use tools for metering sensors and analysing up-to-the-minute data either graphically or statistically. Real-time data can be viewed superimposed on floor plans, to give a visual overview of the latest data. Automatic email reports mean a hassle-free way of sending updates to stakeholders.

Data Collection

System Users

Unlimited numbers of users per site*:

- The Site Administrators have full access to Darca Connect's features.
- The Department Administrators* can take responsibility for their area of the site.
- The Secondary Users have read-only access to their area of the site.

Supported Devices & Upgrades

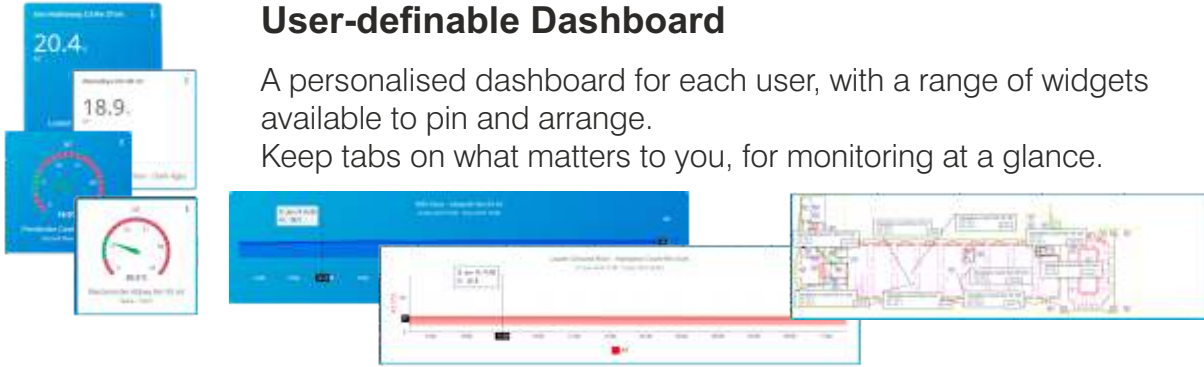

Data from existing Darca Heritage sites can be imported into a Darca Connect site for a seamless upgrade. Not only can Darca Connect import data from Eltek GenII systems, it can also work directly with the brand new range of Sigfox transmitters, with no gateway connection required.

*depending on version

Software Features*

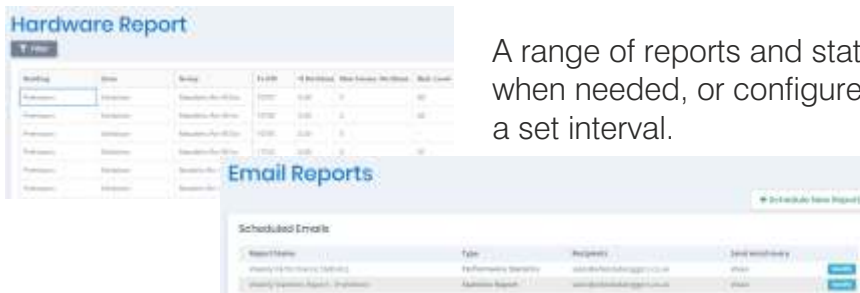

User-definable Dashboard

A personalised dashboard for each user, with a range of widgets available to pin and arrange. Keep tabs on what matters to you, for monitoring at a glance.

Reports, Statistics and Automation

A range of reports and statistics can be generated when needed, or configured to send automatically at a set interval.

Get notified with alarms**

With definable alarm levels and hardware alarms, you can be notified by email and/or SMS should something go wrong.

Latest Data, at a glance

Check the latest values for each transmitter, and get notified if anything is outside of defined limits.

User and Site Management

Easily manage users and define what each can do and see. Group transmitters by location for simple management of your site.
