## Customisable Dashboard

Create your own dashboard with a range of widgets to display the information that matters to you.

## Alarms & Notifications

Get notified via email or SMS if readings go outside of your defined alarm limits. Display data overlaid over floorplans and view historical data on charts, so you can see exactly where the issue is, and what's been going on.

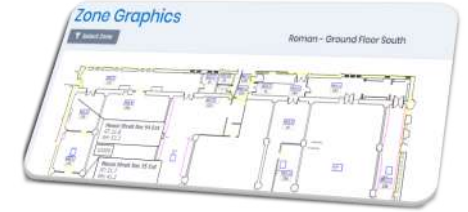

## Charting, Reports & Analysis

View charts with historic data, overlay realtime data on floorplans and generate a range of statistics and reports for powerful analysis of your data. Export these to share with key stakeholders or automate email reports at a set interval.

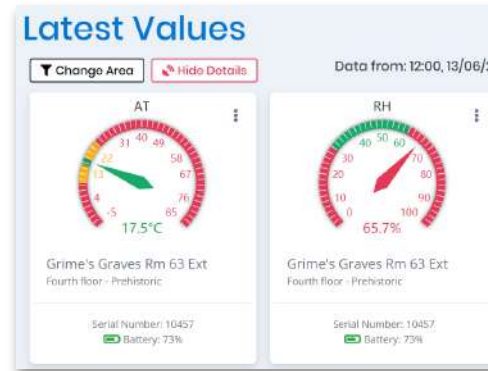

## Zone Graphics

Overlay the most recent data on floorplans, with anything outside of threshold or alarm limits highlighted.

## Metering & Latest Values

View the latest values and perform quick hardware checks, with filtering and sorting options to show the area of your site that you want to see.

## User Management

Add users, change their permissions and restrict what area of a site they can see or manage.

## Automation

A range of options for automating your workflow, from automatically downloading the latest data, to sending out customised reports at defined intervals.
